

NOVIMID

PHYSICIAN-DIRECTED HEALTH OPTIMIZATION
TELEHEALTH • COMPOUNDING PHARMACY • PERSONALIZED CARE

BRAND IDENTITY GUIDELINES — 2026

Logo & Lockups

The Novimid logo consists of two elements: the N-mark (a flowing, two-tone sage green letterform with a circular dot accent) and the wordmark "novimid" in Midnight Forest. The mark uses a layered transparency to create depth. These elements must never be altered, redrawn, recolored, or approximated.

APPROVED LOGO VARIATIONS

PRIMARY LOGO

CLEAR SPACE RULE

Maintain a minimum clear space equal to the height of the mark on all four sides of the logo. No other graphic elements, text, or imagery may enter this zone.

LOGO DON'TS

- ✗ Do not stretch or distort the mark
- ✗ Do not recolor the mark or wordmark
- ✗ Do not add drop shadows or outlines
- ✗ Do not place the logo on a photographic background without a solid color panel
- ✗ Do not recreate or approximate the mark in any other format
- ✗ Do not separate the mark from the wordmark except in approved icon contexts

Color Palette

The Novimid palette is derived directly from the logo mark. The two sage greens of the N-mark, the deep forest wordmark, and a range of supporting neutrals form the complete system.

PRIMARY COLORS

				
Midnight Forest #2C3A35 Primary text & dark UI	Sage #6B8F71 Brand accent, CTA	Sage Light #8BAE8C Mark highlight tone	Sage Mist #C5D5B0 Subtle marks & tints	Cloud #F0F4F1 Background tint

SUPPORTING NEUTRALS

				
Forest #4A5A52 Body copy	Sage Mid #7A9580 Labels & tagline	Fog #B0BDB3 Captions & metadata	Mist #E2E6E3 Borders & dividers	Pure White #FFFFFF Primary background

COLOR USAGE RULES

- White is the primary background — use it as the default canvas
- Cloud (#F0F4F1) is used for section backgrounds and card fills
- Sage (#6B8F71) is used for CTAs, accents, and interactive elements
- Midnight Forest (#2C3A35) is used for primary CTA buttons and dark panels
- No gradients on backgrounds. No textures. No imagery behind body text
- All borders must be 0.5pt — never heavier. This is core to the minimalist aesthetic

Type System

Novimid uses a two-family type system: DM Serif Display for editorial moments, and DM Sans for all headings, body, labels, and UI elements. Light weight (300) is the default — heaviness works against the brand's minimalist character.

DISPLAY — DM SERIF DISPLAY

Health, optimized.

Reserved for hero headlines and editorial moments only. Use sparingly.

HEADING — DM SANS 300

Physician-Directed Health Optimization

All headings and UI elements. Light weight preserves the minimalist character.

LABEL — DM SANS 400, TRACKED

TELEHEALTH • COMPOUNDING PHARMACY •
PERSONALIZED CARE

Section labels, navigation, eyebrows. Always in Sage Mid (#7A9580). Never in Midnight Forest.

BODY — DM SANS 300

Novimid connects patients with board-certified physicians who design evidence-based protocols — from peptide therapy to GLP-1 and TRT — delivered through our licensed compounding pharmacy with clinical precision.

TYPE SCALE

DISPLAY	48pt	DM Serif Display / Regular
H1	32pt	DM Sans / 300 Light
H2	24pt	DM Sans / 300 Light
H3	18pt	DM Sans / 400 Regular
BODY	15pt	DM Sans / 300 Light
LABEL	11pt	DM Sans / 400, Tracked, Uppercase, Sage
CAPTION	11pt	DM Sans / 400, Tracked, Uppercase, Fog

Digital Icons

The Novimid mark is used as the icon across all digital surfaces. At all sizes, use Midnight Forest (#2C3A35) as the icon background — never sage green, which reduces contrast at small sizes below WCAG AA.

ICON SIZES

512 × 512	App Store / Google Play icon
192 × 192	PWA / Progressive Web App icon
64 × 64	Touch icon
32 × 32	Browser favicon
16 × 16	Browser tab favicon (smallest)

ICON BACKGROUND RULES

- Always use Midnight Forest (#2C3A35) as the icon background at all digital sizes
- Never place the mark on a sage or green background at icon sizes
- A white background variant is acceptable for web/OG image use at large sizes only
- The icon background uses a rounded square (squircle) shape for App Store and PWA contexts

Voice Pillars

Novimid communicates with the authority of medicine and the warmth of a physician who listens. Every word should reflect one of these six pillars.

01	Clinical, not cold We speak with the authority of medicine and the warmth of a physician who listens. Precise language — no jargon walls. Write: ✓ "Your protocol is designed around your labs, not a template." ✗ "Our cutting-edge AI-powered wellness journey."
02	Confident, not loud We don't oversell. Our results are the proof. Short sentences. No exclamation points in clinical copy. Write: ✓ "Physician-directed. Evidence-based. Yours." ✗ "Transform your life with our AMAZING protocols!!!"
03	Empowering, not prescriptive We give patients agency. We inform, not dictate. The patient and physician decide together. Write: ✓ "Understand your options. Choose your path." ✗ "You need to start this protocol immediately."
04	Modern, not trendy We avoid buzzwords that age. No "biohacking," no "hack your hormones." We describe what we do plainly. Write: ✓ "Peptide therapy, prescribed and compounded for you." ✗ "Biohack your way to peak performance."
05	Transparent, not evasive We name what we do: compounding pharmacy, telehealth, peptide therapy, GLP-1, TRT. Clarity builds trust. Write: ✓ "Licensed 503A compounding pharmacy." ✗ "Our proprietary wellness formulations."
06	Human, not robotic Real outcomes for real patients. We tell stories. We acknowledge complexity without hiding behind clinical distance. Write: ✓ "Most patients see results in 6–8 weeks." ✗ "Results may vary. Individual outcomes not guaranteed."

TONE BY CHANNEL

WEBSITE	PATIENT PORTAL	SOCIAL MEDIA	B2B / PARTNERS
---------	----------------	--------------	----------------

Clinical authority + warmth. Lead with outcomes. No fluff.	Warm, instructional, plain-language. Guide without anxiety.	Educational first. Occasional patient stories. No hype.	Professional, data-forward. Clinical language is appropriate.

Taglines & Messaging

PRIMARY TAGLINE

Your Protocol. Your Physician. Your Results.

PRIMARY BRAND TAGLINE

ALTERNATE TAGLINES BY CONTEXT

Physician-Directed Health Optimization LOGO LOCKUP SUB-TAGLINE	Precision medicine, compounded for you. PHARMACY / CLINICAL	Where telehealth meets the compounding lab. B2B / PARTNERSHIPS
Evidence-based. Physician-led. Personalized. SEO / ABOUT PAGE	Optimized health starts with a real doctor. PAID SOCIAL HEADLINE	The last wellness platform you'll need. BRAND CAMPAIGN

How the Story is Structured

Novimid’s brand story operates in three layers. Each layer has a distinct audience, purpose, and placement in the funnel. Never flatten all three into a single message.

LAYER 1 — PATIENT EMOTION (Top of Funnel: Ads, Social, Hero)

Lead with the patient’s truth: most high-performing adults feel like their body isn’t keeping pace with who they know they are. Generic care gives generic answers. Novimid changes that. Do not lead with the product or the molecule — lead with the outcome and the physician relationship.

LAYER 2 — CLINICAL PROMISE (Mid Funnel: Website, Pillar Pages, About)

Physician-directed protocols, precision compounding, and genuine accountability at every step. Your Protocol. Your Physician. Your Results. This is where the tagline lives. Explain what personalized medicine actually means in practice — real physicians, real prescriptions, real clinical oversight.

LAYER 3 — STRUCTURAL PROOF (Bottom of Funnel: Trust, Provider Pages, B2B)

The integrated California supply chain is a credibility asset — not a brand story. Deploy it here, where providers and informed patients are asking “why should I trust this company?” The five-step proof chain answers that question directly:

Created · Manufactured · Tested · Packaged · Shipped

ALL FROM START TO FINISH IN CALIFORNIA

No overseas supply chains. No mystery middlemen. No compromises on quality. This is the language of trust — use it where trust is being evaluated, not where curiosity is being sparked.

Visual Language

SPACING SYSTEM

Use this 8px-base spacing scale throughout all digital and print executions.

4px xs	8px sm	16px md	24px lg	40px xl	64px 2xl	96px 3xl	128px 4xl	192px 5xl
-----------	-----------	------------	------------	------------	-------------	-------------	--------------	--------------

BORDER RADIUS

4px Buttons	8px Inputs	12px Cards	24px Pills	50% Avatars
----------------	---------------	---------------	---------------	----------------

BORDER WEIGHT

All borders: 0.5pt (or 0.5px digital). Never 1pt or heavier. Thin borders are core to Novimid’s minimalist identity.

APPROVED BACKGROUNDS

Pure White Primary — default canvas	Cloud Tint Sections & card fills	Midnight Forest CTA panels & dark sections
---	--	--

No gradients on backgrounds. No textures. No imagery behind body text. White space is a brand asset — use it generously.

Do & Don't

DO ✓ Use the full wordmark + tagline lockup at primary placements ✓ Maintain minimum clear space = 1× mark height on all sides ✓ Place the logo on white, Cloud tint, Midnight Forest, or Sage backgrounds only ✓ Use DM Serif Display for editorial headlines only — use sparingly ✓ Keep all borders at 0.5pt — no heavier, ever ✓ Use tracked uppercase Sage Mid labels for section headers ✓ Favor white space — let every element breathe ✓ Always write "novimid" in lowercase when used in body text	DON'T ✗ Stretch, rotate, recolor, or redraw the logo mark ✗ Add drop shadows, glows, or outlines to the logo ✗ Place the logo directly on a photograph without a solid panel ✗ Use bold weights in body copy — light is the Novimid weight ✗ Use typefaces other than DM Sans and DM Serif Display ✗ Use full-saturation colors outside the brand palette ✗ Use exclamation points in clinical or website copy ✗ Recreate or approximate the mark in any other format
--	--

REGULATORY NOTE

All marketing materials referencing compounded formulations (BPC-157, GHK-Cu, etc.) must use language consistent with 503A compounding-eligible status — never FDA-approved drug language. Note: BPC-157 is subject to an ongoing PCAC review (July 2026) regarding its status on the 503A Bulks List. Marketing should reflect compounding-eligible status, not FDA drug approval status, and must not pre-empt any regulatory outcome. GLP-1 and TRT copy must reflect current DEA telemedicine guidelines. All clinical claims require physician review before publication. Do not lead patient-facing marketing with specific compound names as the primary brand promise — lead with physician-directed optimization, then describe the clinical tools available.
